DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/12/06 has been entered.

Allowable Subject Matter

2. Claims 12-19,30-37, and 39-41 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is the limitation in independent claims 12, 33, and 36 of forming a pair of flow modifiers bordering two sides of the die placement location, where a molding compound is introduced over the die (overmolding flow), and a molding compound is also introduced between the die and base substrate (underfill flow), in addition to the other limitations in the claims.

The closest prior art of record pertaining to the use of a flow modifier bordering a device placement location on a substrate either uses a set of discrete standoff posts (see US 6,324,069 to Weber) or uses a continuous ring with openings for dispensing underfill encapsulant (see Weber; US 6,048,656 to Akram, or US 5,841,194 to Tsukamoto, for example). Although Weber generally suggests that different flow modifier geometries are possible, neither Weber nor any

other prior art reference of record indicates the use of two separate flow modifiers forming borders along two sides of the die placement location. The Examiner notes that the shape and location of the flow modifiers directly influence the degree to which voids or air bubbles are trapped in the underfill encapsulant by influencing the direction and speed of the underfill flow as well as the tendency for the overmolding flow to wrap around the edges of the die, and thus, the shape and location of the flow modifiers is considered critical. Since the prior art fails to teach use of a pair of flow modifiers along two sides of a device placement location, and since the claimed geometry of the flow modifiers provides the critical advantage of enabling a broad, linear flow of the underfilling encapsulant while preventing any wrap-around of the overmolding encapsulant, thus inhibiting void formation in the underfill, it is the Examiner's opinion that the invention as claimed would not have been obvious to a person having ordinary skill in the art.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
